

# SPRINTLAB – INDEPENDENT EVALUATION REPORT

AIR

Prepared by: OBSW Team GMV

Approved by: Daniel Silveira

Authorized by: Carolina Serra

Code: GMV/10234/25

Version: 1

Date: 25/06/2025

Internal code: GMV N/A

## DOCUMENT STATUS SHEET

| Version | Date       | Changes |  |
|---------|------------|---------|--|
| 1       | 25/06/2025 | 9       |  |

## TABLE OF CONTENTS

|   |   |
|---|---|
| 1. INTRODUCTION .....                                     | 5 |
| 1.1. PURPOSE .....  | 5 |
| 1.2. SCOPE .....  | 5 |
| 1.3. DEFINITIONS AND ACRONYMS .....                       | 5 |
| 1.3.1. Definitions .....                                  | 5 |
| 1.3.2. Acronyms .....                                     | 5 |
| 2. REFERENCES .....                                       | 6 |
| 2.1. APPLICABLE DOCUMENTS .....                           | 6 |
| 2.2. REFERENCE DOCUMENTS .....                            | 6 |
| 3. TESTING OVERVIEW .....                                 | 7 |
| 3.1. SYSTEM OVERVIEW .....                                | 7 |
| 3.2. APPROACH .....                                       | 7 |
| 3.3. TESTING ENVIRONMENT, TOOLS AND REQUIRED INPUTS ..... | 7 |
| 4. TEST DESCRIPTION AND RESULTS .....                     | 8 |
| 4.1. CORE SYNCHRONIZATION TESTS .....                     | 8 |
| 4.2. ADVANCED FEATURE TESTS .....                         | 8 |
| 4.3. USABILITY AND PERFORMANCE FEEDBACK .....             | 8 |
| 5. CONCLUSION .....                                       | 9 |

## LIST OF TABLES AND FIGURES

|                                      |   |
|--------------------------------------|---|
| Table 1-1 Definitions .....          | 5 |
| Table 1-2 Acronyms .....             | 5 |
| Table 2-1 Applicable Documents ..... | 6 |
| Table 2-2 Reference Documents .....  | 6 |

**No table of figures entries found.**

## 1. INTRODUCTION

### 1.1. PURPOSE

The purpose of this document is to present the results of an independent evaluation carried out by GMV on the SprintLab tool, developed by final-year students of Universidade Lusófona. This assessment aimed to verify SprintLab's operational performance as a project management integration solution between GitLab and Microsoft Teams.

### 1.2. SCOPE

This report covers functional, non-functional, and usability testing conducted by five GMV engineers using SprintLab in the context of two active real-world projects: Horizon Europe Schumann and GMV AIR. The evaluation includes bidirectional synchronization, dashboards, performance, reliability, and scalability aspects.

### 1.3. DEFINITIONS AND ACRONYMS

#### 1.3.1. DEFINITIONS

Concepts and terms used in this document and needing a definition are included in the following table:

**Table 1-1 Definitions**

| Concept / Term | Definition |
|----------------|------------|
|                |            |

#### 1.3.2. ACRONYMS

Acronyms used in this document and needing a definition are included in the following table:

**Table 1-2 Acronyms**

| Acronym | Definition |
|---------|------------|
|         |            |

## 2. REFERENCES

### 2.1. APPLICABLE DOCUMENTS

The following documents, of the exact issue shown, form part of this document to the extent specified herein. Applicable documents are those referenced in the Contract or approved by the Approval Authority. They are referenced in this document in the form [AD.x]:

**Table 2-1 Applicable Documents**

| Ref.   | Title | Code | Version | Date |
|--------|-------|------|---------|------|
| [AD.1] |       |      |         |      |
| [AD.2] |       |      |         |      |
| [AD.3] |       |      |         |      |
| [AD.4] |       |      |         |      |

### 2.2. REFERENCE DOCUMENTS

The following documents, although not part of this document, amplify or clarify its contents. Reference documents are those not applicable and referenced within this document. They are referenced in this document in the form [RD.x]:

**Table 2-2 Reference Documents**

| Ref.   | Title | Code | Version | Date |
|--------|-------|------|---------|------|
| [RD.1] |       |      |         |      |
| [RD.2] |       |      |         |      |
| [RD.3] |       |      |         |      |

## 3. TESTING OVERVIEW

### 3.1. SYSTEM OVERVIEW

SprintLab is a middleware and plugin-based integration platform that enables seamless project tracking and management between GitLab and Microsoft Teams. The solution supports Kanban and Gantt visualizations, real-time updates, and multi-project configuration.

(See Section 2.2 for evaluation approach.)

### 3.2. APPROACH

The assessment consisted of executing SprintLab in realistic operational conditions, replicating typical use cases of project coordination. The GMV team followed a black-box and user-oriented testing approach to evaluate the system based on:

- Synchronization accuracy between GitLab and Teams.
- Responsiveness of dashboards and visual components.
- Support for multi-project and multi-team environments.
- Compliance with the functional requirements defined in the SprintLab technical documentation.

In total, over a dozen test scenarios were covered, including edge cases and system resilience.

### 3.3. TESTING ENVIRONMENT, TOOLS AND REQUIRED INPUTS

Projects tested:

- Schumann: A Horizon Europe project focused on cybersecurity, collaborative threat detection and defense.
- AIR: A GMV product for secure virtualization and automated orchestration of software environments.

Test team: 5 GMV engineers from space and IT divisions.

Infrastructure: GitLab (Enterprise & Self-Hosted), Microsoft Teams (Standard Channels), SprintLab deployed on Fly.io.

Inputs: Existing GitLab repositories and work packages (WPs) with open issues and merge requests.

Tooling: Native Teams interface, SprintLab plugin interface, GitLab Webhooks, browser, logs viewer.

## 4. TEST DESCRIPTION AND RESULTS

This section includes a summary of the verification and validation activities results. It identifies the verified and validated elements by marking its version number. Reference will be made to the applicable documents and/or plans. It will identify any incidents and summarize how they were solved.

### 4.1. CORE SYNCHRONIZATION TESTS

| Test Scenario                        | Description  | Result  |
|--------------------------------------|--|---------|
| Issue creation in GitLab             | Reflected immediately in Teams Kanban board          | Success |
| Task creation in Teams               | Corresponding issue generated in GitLab              | Success |
| Status updates (e.g., closing issue) | Reflected bidirectionally in GitLab and Teams        | Success |
| Label changes and filtering          | Correct rendering and filtering on both sides        | Success |
| Gantt chart rendering                | Updated automatically with correct time-line mapping | Success |

### 4.2. ADVANCED FEATURE TESTS

| Test Scenario                                       | Description  | Result  |
|---|--|---------|
| Simultaneous management of multiple GitLab projects | Independent synchronization in distinct Teams channels | Success |
| Notifications for Merge Requests                    | Created and updated in Teams                           | Success |
| Checklist/subtask visibility                        | Reflected correctly as subtasks in Kanban board        | Success |
| Real-time updates under load                        | Handled +100 events/min without delays                 | Success |
| Token and API authentication handling               | All API interactions secured via OAuth2 and MSAL       | Success |

### 4.3. USABILITY AND PERFORMANCE FEEDBACK

All testers found the tool intuitive and responsive. Project dashboards allowed faster monitoring of task closure and WP evolution. Participants estimated:

- **30–50% reduction** in time spent coordinating and reporting task progress.
- Improved **clarity in communication** and project visibility across distributed teams.

## 5. CONCLUSION

SprintLab demonstrated robust, reliable, and production-grade behavior in real-world project contexts. All tested functionalities performed as expected, with no critical issues encountered.

GMV considers SprintLab suitable for operational use and recommends exploring its broader adoption or commercialization.
